The new sign-in

Pairing devices with the TD-Portal – Track of the Day, GS-Route, TD-Mac, GSR-Mac and Track of the Day Mobile

> ### At a glance
>
> - No licence key, no e-mail and no password in the app any more.
> - Everything runs through your TD-Portal account: **portal.track-of-the-day.com** → "My devices".
> - **One** licence for the whole TD suite, for up to **10** private devices.
> - Existing customers need do nothing: the old key is converted automatically on first start.

1. What is changing

Until now you had to register and activate a licence and enter a licence key, e-mail address and password in the app. That is no longer necessary. From now on everything runs through the TD Cloud and your TD-Portal account. You pair each device with your account once, using a short code. It takes less than a minute.

2. One licence for everything

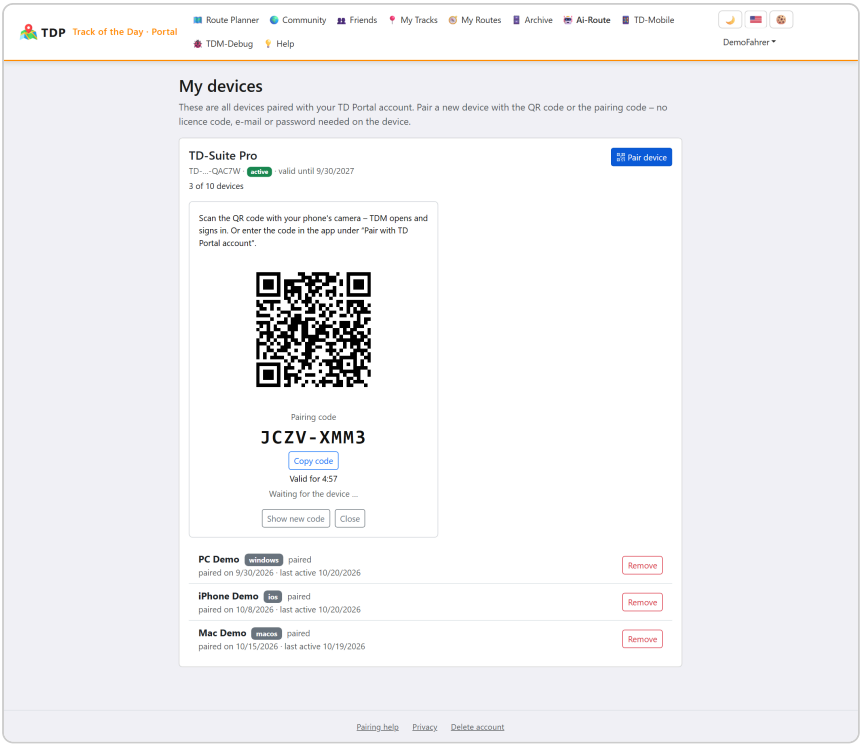

There is just one licence for all programs of the TD suite: **Track of the Day (TD8)**, **GS-Route**, **Track of the Day for Mac**, **GS-Route for Mac** and **Track of the Day Mobile (TDM)**. It covers up to 10 private devices, for example PC, laptop, phone and tablet.

3. Already have a licence?

Then there is nothing to do. When you first start the new version, the app converts your previous licence key automatically. The remaining term and Pro access are fully kept. The licence then appears in your TD-Portal account – the account you registered with before.

4. Show a code in the portal

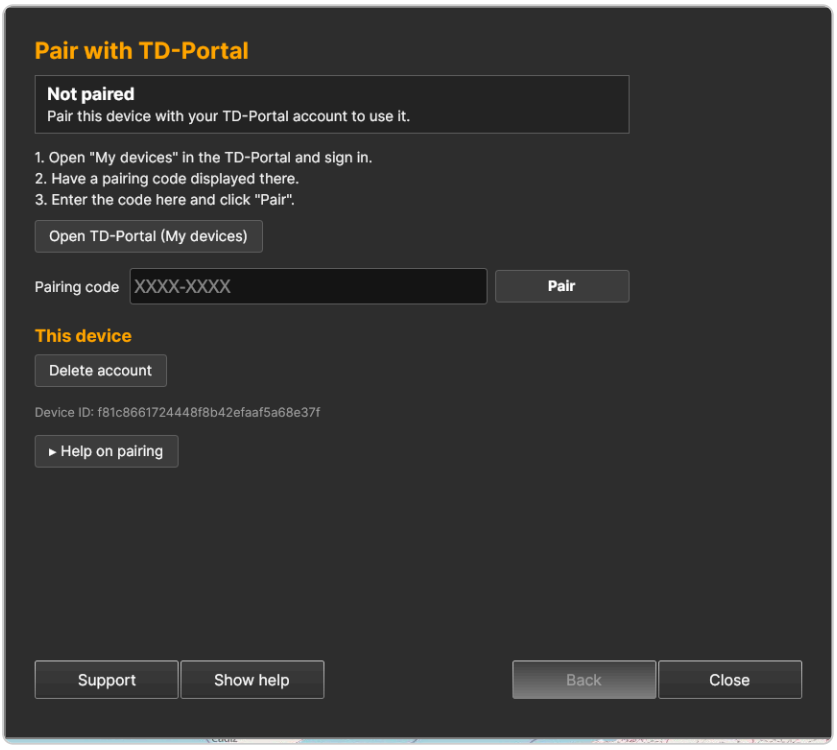

1. Open **portal.track-of-the-day.com** and sign in.
2. Open **"My devices"** and click **"Pair device"**.
3. The portal shows a QR code and the pairing code (e.g. `7K3M-9QXP`). It is valid for 5 minutes and only once; a new one then appears automatically.

"My devices" → "Pair device": QR code and pairing code

5. Pair Track of the Day and GS-Route (Windows, Mac, Linux)

1. Open the **licence management** in the app. The first page is **"Pair with TD-Portal"**.
2. Type the code into the **"Pairing code"** field and click **"Pair"**. Case and the dash do not matter.
3. The app shows "Paired – valid until …". Done.

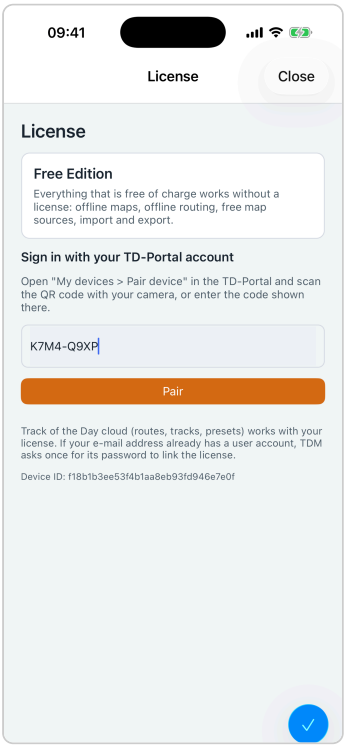

Pairing page in Track of the Day / GS-Route

6. Pair Track of the Day Mobile (iOS, Android, Windows, Mac)

With the camera: point your phone's camera at the QR code and tap the notification. TDM opens with the code already filled in. Confirm with **"Pair"**.

Or by code: in TDM under **Settings → Login & License**, section **"Sign in with your TD-Portal account"**, type the code and tap "Pair". If the portal is open on the same device, use **"Copy code"**.

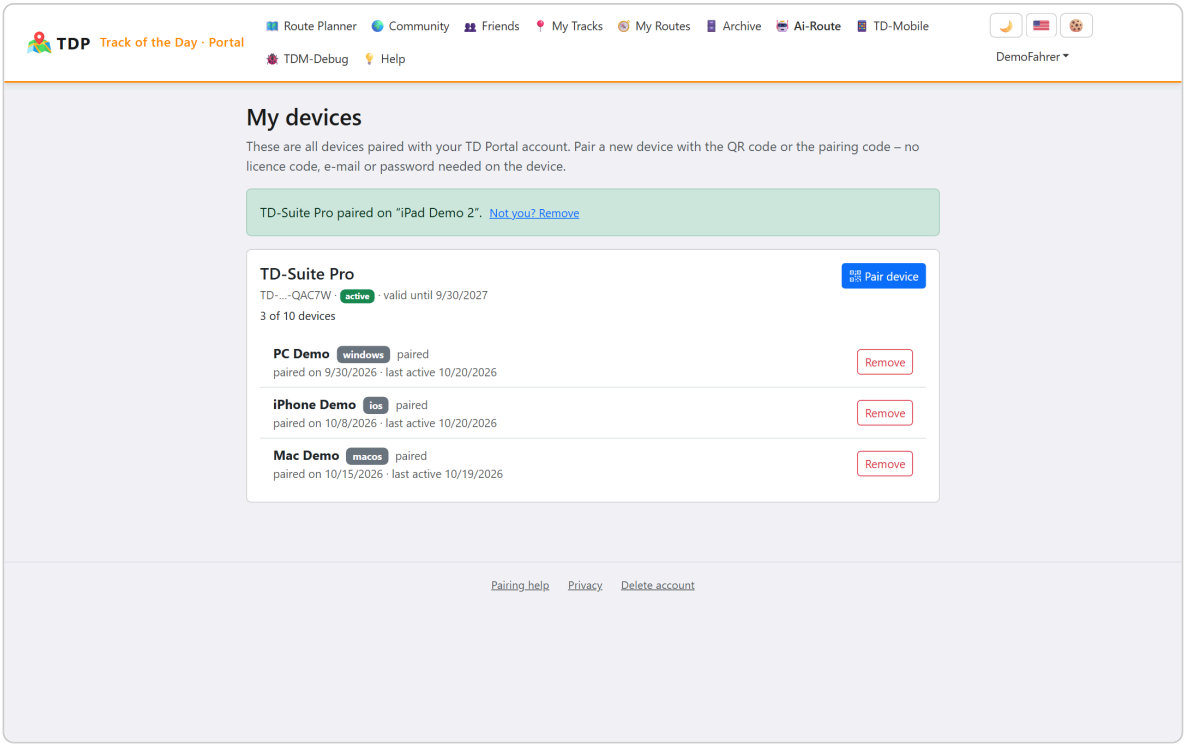

TDM: "Sign in with your TD-Portal account"

7. Manage devices and delete the account

Every pairing appears immediately in "My devices", and you also receive an e-mail. Remove an old or unknown device there with **"Remove"** – this also frees a place.

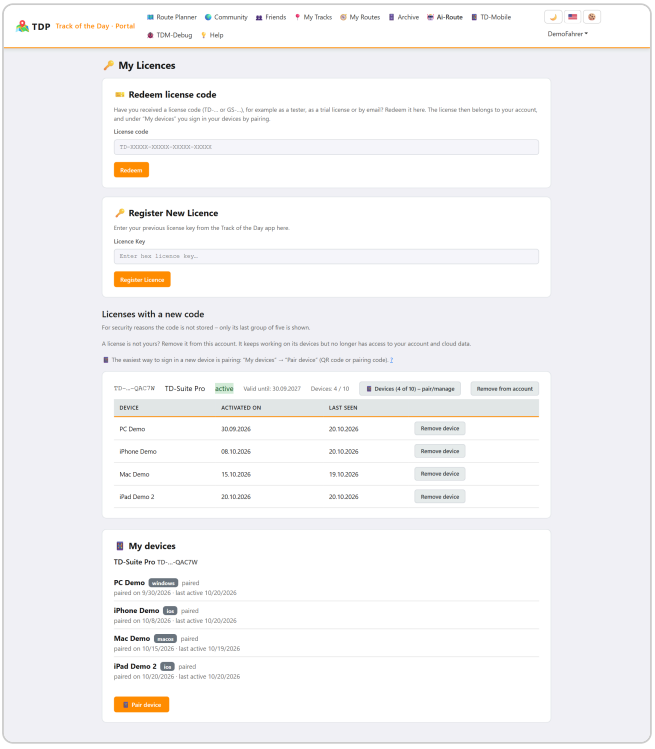

Delete account is available in the portal and in the app. Your account and cloud data are permanently deleted and any remaining term is lost. Files on your devices are kept.

"My devices" after pairing

8. Redeem a licence code (new customers and testers)

If you have received a licence code, redeem it in the portal under **"My licences"** → **"Redeem licence code"** – or enter it when you register. The licence then belongs to your account; pair your devices as described above.

"My licences" → "Redeem licence code"

9. Outlook

We are working on making it simpler to buy the licence, too. In future there will be a convenient automatic renewal that you can end at any time.

Frequently asked questions

The code has expired.
No problem: the portal shows a new code automatically.

The device limit is reached.
Remove a device you no longer use in “My devices”.

I don’t recognise a device in the list.
Click “Remove”. The device is then no longer paired.

Do I need internet?
For pairing, yes. Afterwards the app keeps working offline and confirms the pairing automatically once it is back online.
